

GVD Protects El Centro School District in Southern California

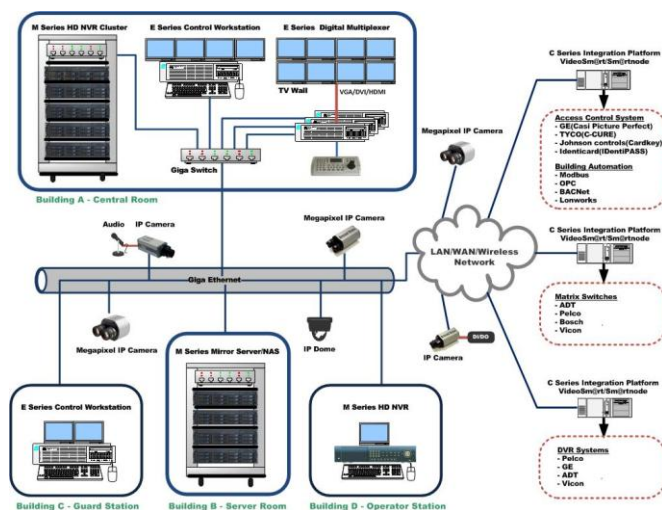

GVD successfully builds an IP based surveillance system for the school district in Southern California. All students, school employees can work in the school campus with a peace of mind. The project implementation started in September 2007, and expects to complete by May of 2008.

Problem & Issue:

El Centro School District is located in Southern California, one of the most promising new commercial and industrial areas. The District has more than 6,300 students at nine elementary schools, one middle school and one junior high school. And there are faculties approximately 700. With national research showing that school crime has become increasingly violent in recent years, the District decided to deploy a new IP based but simply to use surveillance management platform to connect all the security systems, to have the better protection to its students and teachers.

Solution and Benefit:

GVD's integration platform VideoSm@rt links up various security systems, such as DVR, Burger Alarms, and over 90 ACTi's IP Cameras in different locations around the District. This integration system uses the Internet to send real-time images of the school to the control centre even during off hours, eliminating the need for

full-time security officers on campus. And the web based interface of system is very easy to use; users don't have special training are also can operate it. With this surveillance system, the District can effectively reduce the expense of security and successfully prevent crimes.

About Genius Vision Digital www.gvdigital.com

Genius Vision Digital (GVD) is a company based in Taipei with cutting edge technologies. GVD brings the next generation of IP surveillance systems for the upcoming "Full High Definition" age by providing robust video storage and management systems for the mission critical applications in Banking, Hospital, Retailing, Government, and Gaming etc.
