

# GVD at Tokyo Security Show in 3/3 ~ 3/6

## GVD and Milesight Team Up at Tokyo Security 2026 to Debut Integrated AI + IoT Smart Solutions

**TOKYO, JAPAN – March 3, 2026** – Genius Vision Digital (GVD), a global leader in enterprise Video Management Systems (VMS), and Milesight Japan distributor **SUN Digital System (SUNDS)**, a high-tech company specializing in AIoT, 5G, and video surveillance, today announced their strategic partnership at the **2026 Tokyo Security Show**, held at the Tokyo Big Sight.

The collaboration represents a significant step forward in the Japanese market, combining GVD's robust VMS architecture with Milesight's diverse portfolio of AI cameras and Internet of Things (IoT) sensors to deliver a truly unified smart solution.

## Total Parking Management with AI

Leveraging **SUNDS** extensive experience and steady growth in the Japan market over the past several years, the partners are showcasing a **Total Parking Solution**. This integration goes beyond simple license plate recognition by combining Milesight's AI-powered edge cameras with GVD's VMS 4.0 Max management capabilities. Key benefits include:

- **Comprehensive AI Analytics:** Identifying vehicle types, colors, and license plates with extreme precision.
- **Unified Management:** Consolidating multiple parking sites into a single GVD command interface for real-time monitoring and historical data analysis.
- **Enhanced Safety:** Utilizing AI to detect anomalies such as wrong-way driving or illegal parking within the facility.

## Empowering Customers with a Complete IoT + VMS Ecosystem

A major highlight of the partnership is the deep integration between **GVD VMS and Milesight's IoT sensors**. This synergy transforms traditional security into a holistic facility management tool. For the first time, Milesight customers in Japan can access a completed solution where video data and environmental sensor data (such as air quality, occupancy, and leak detection) coexist in one platform.

- **Sensor-Triggered Video:** Automatically pop-up live video when an IoT sensor detects an event, such as a temperature spike or unauthorized door opening.
- **Smart Data Visualization:** Viewing sensor readings alongside live footage on GVD's interactive E-maps.
- **Operational Efficiency:** Streamlining workflows for building managers by providing a single point of control for both security and environmental monitoring.

"Milesight has made incredible progress in Japan over the years, and we are thrilled to team up with them to offer a total solution," said a GVD spokesperson. "By integrating our VMS with Milesight's AIoT ecosystem, we are providing our Japanese customers with an unprecedented level of situational awareness that covers both security and operational intelligence."

Visit the GVD and Milesight exhibit at Tokyo Big Sight during the Tokyo Security Show to see these integrated AI and IoT solutions in action.

**### About GVD (Genius Vision Digital)** GVD is a premier developer of enterprise-level VMS solutions, specialized in large-scale, high-end projects requiring AI integration and mission-critical reliability for Smart Cities and Industrial sectors.

**### About Milesight** Milesight is a fast-growing AIoT solution provider committed to offering the next-generation of video surveillance, 5G, and IoT technologies, with a strong established presence in the Japanese market.
